

Solution Brief

Balance IT Flexibility with Logicalis + HPE GreenLake

Balance IT Flexibility with Logicalis + HPE GreenLake

To drive digital transformation and propel strategic business initiatives forward, businesses must transform their approach to IT by adopting flexible, scalable, and cost-effective technologies such as the cloud.

Yet a number of constraints prevent businesses from going all-in on cloud adoption, from skills shortages to legacy IT entanglements to security and compliance concerns. As a result, most companies remain indefinitely invested in hybrid IT environments that stretch from edge to cloud.

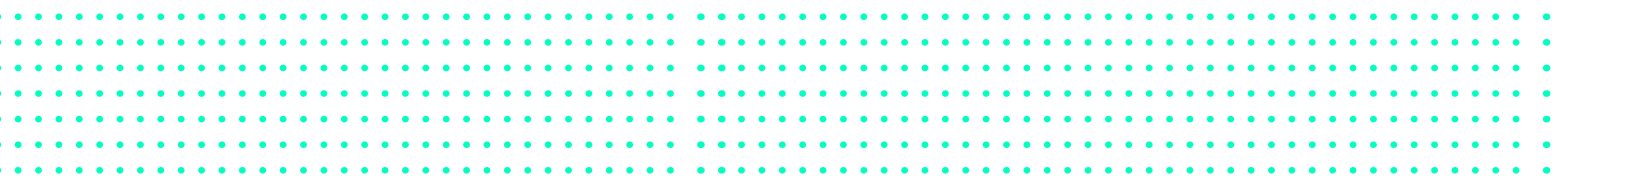

Companies that want to stay agile, competitive, and relevant must therefore find a solution that balances the need for IT flexibility against the complexities, costs, and limitations of traditional and hybrid IT.

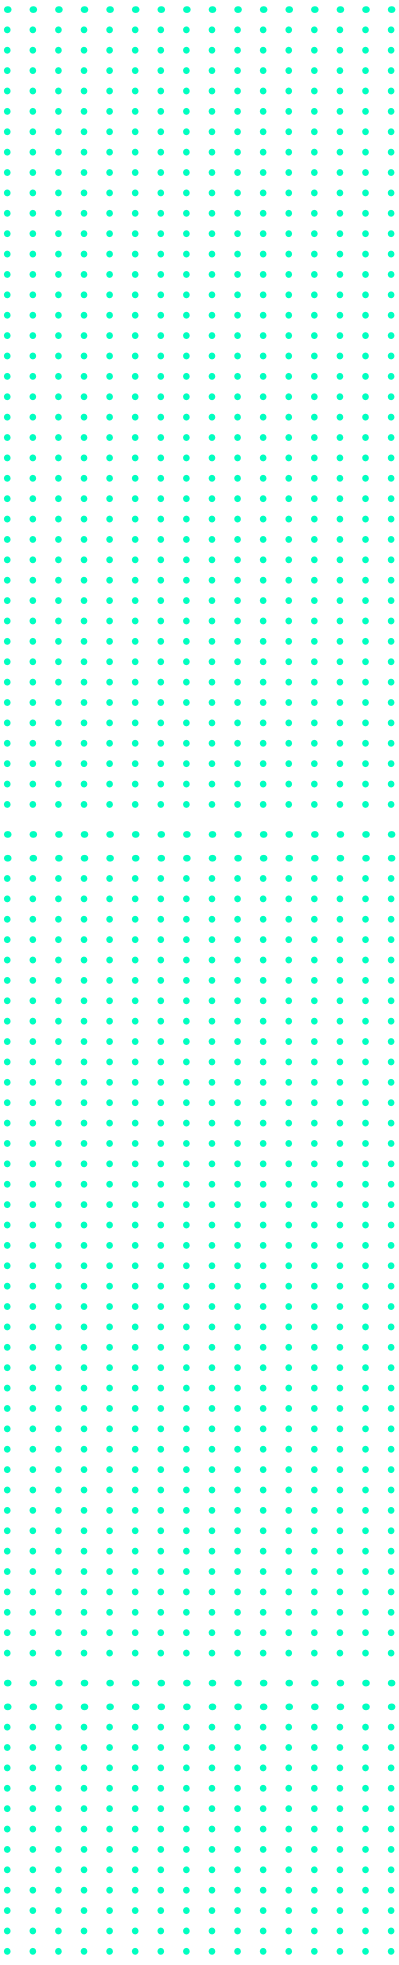

The solution: partner with an expert managed service provider who can help you free up internal IT resources, stay flexible, drive innovation, and further your digital transformation goals with leading-edge solutions, such as HPE GreenLake.

Barriers to IT and Business Flexibility

There are several barriers that stand in the way of IT flexibility:

Cost	Overprovisioning - Most organizations purchase more capacity than they need Overbudgeting - Upfront capital outlays are costly and create financial constraints
IT Limitations	Lack of Resources - Time spent on ITops means less time spent on business initiatives Legacy IT - Traditional IT and legacy entanglements inhibit innovation and agility
On-Premises IT	Performance - Applications run onsite perform better than those run from the cloud Security and Compliance - On-premises IT offers more security and control over data
Complexity	Hybrid IT Complexity - Companies must find ways to simplify hybrid IT to stay agile and flexible Limited Expertise - Adopting emerging technology requires a range of specialized skills

Simplifying IT with the right solution – and solution provider – can help minimize the issues covered here, enabling the business to regain IT flexibility and focus on strategic initiatives and innovation, rather than day-to-day maintenance or “firefighting.”

79%

of CIOs cite innovation as a key area of focus over the next 12 months

60%+

believe IT plays a leading role in supporting innovation

76%

of CIOs say it's challenging to find the right balance between business innovation & operational excellence

79%

believe their organization is falling behind the competition as they fail to match the pace of change
