

Streamlining IT Infrastructure Management with HPE OneView

Manage compute, storage, and networking through a single application

IT infrastructure is continually evolving and expanding, which introduces a range of new challenges to modern organizations:

Increasing complexity

The more an organization grows its infrastructure, the more complex it is to manage.

Scalability and availability

Infrastructure must be able to scale up or down without compromising quality.

Security and compliance

As infrastructures expand, so do attack surfaces, vulnerabilities, and risks.

Cost and value

Complex and diverse infrastructures are more expensive to acquire, operate, maintain, and upgrade.

Software-defined infrastructure, when managed through the appropriate platform, can streamline and simplify infrastructure lifecycle management, improve staff productivity, increase the pace of technology adoption, and decrease costs associated with downtime and regulatory risks.

Automating IT Infrastructure Management with HPE OneView

HPE OneView offers an integrated IT infrastructure management solution that lets you transform servers, storage, and networking into software-defined infrastructure with efficient workflow automation, a modern dashboard, and a comprehensive partner ecosystem. With a single unified experience, you can tackle the challenges listed above, free up IT resources, and spend more time on strategic business initiatives.

Automate provisioning

Repeatable templates ensure high reliability, consistency, and control.

Connect your software-defined infrastructure from core to cloud

Access device-level lifecycle management across your entire hybrid IT estate with a single click.

Decrease operating expenses and free up IT resources

Take back time and focus on what matters: innovation, growth, and strategic business initiatives.

Easily compose on-premises physical infrastructure using software

Quickly provision, manage, and automate with templates, APIs, and a unified dashboard.

Manage from anywhere

Aggregate HPE OneView connections through a cloud-based console with HPE GreenLake for Compute Ops Management: OneView Edition.

Simplify IT Infrastructure Management with Logicalis + HPE

Logicalis, an HPE partner since 1993, has empowered organizations around the world to drive growth and transformation with HPE's industry-leading portfolio of solutions.
